

# SINAR TECHNOLOGY

## IR-60 Moisture Analyzer

### Features :

- Infrared drying for rapid moisture results
- Fully automatic operation for ease of use
- Precision milligram balance for accurate results
- Large LCD display
- CQR Quartz heating element for excellent heating control
- Programmable standby temperature
- Simple calibration for both balance and heating elements

### Specifications

- |                               |   |
|-------------------------------|---|
| • Heat source                 | CQR Quartz Heater                           |
| • Temperature setting         | 30 - 210° C in 1° increments                |
| • Balance capacity            | 60 grams                                    |
| • Accuracy of weighing system | 1mg   |
| • Readability                 | 0.01%                                       |
| • Working range               | 0.20 – 99.90%                               |
| • Units of results            | %moisture, solids, volatiles & moisture dry |
| • Analysis modes              | Fully Automatic or semi-automatic           |
| • Power requirements          | 115/230VAC, 50/60Hz, self adjusting supply  |
| • Shipping dimensions         | 508 x 483 x 318mm                           |
| • Shipping weight             | 12.2Kg                                      |
| • Serial Port                 | RS232                                       |
