SINAR TECHNOLOGY

Sinar MCal Calibration Software

- Check your AP6060's calibrations any time for complete confidence

- Recalibrate your 6060/6070 automatically if problems are found

- Generate printable ACCS compliant calibration certificates

- Receive calibration curve set updates by email and always stay up to date

Product Description

The MCal software gives users of the Sinar moisture meter the power to update, check and change their calibration settings using a Microsoft Windows PC or laptop. MCal subscribers are sent a calibration kit that provides everything they need including a digital balance, thermometer and a certified calibration sample which is renewed every 6 months.

Using the software couldn't be easier, on screen prompts with clear colour photographs detail every step of the process allowing a calibration check to become a daily occurrence rather than returning the machine every year and having to make do without it. The software also allows ACCS compliant calibration certificates to be printed. The confidence these checks provide is invaluable, especially when drying grain where precise moisture control translates directly into profit.

The other outstanding feature of the MCal system is that the latest crop calibration data is emailed out to subscribers as and when it becomes available, a process that continually keeps MCal subscribers up to date maintaining Sinar Technology's high standards.

Product Features

Kit contents:	PC to instrument cable, installation CD, 1 year licence, 2 x 240 g calibration samples (dispatched every 6 months in February and August), digital balance, digital thermometer
System requirements:	Microsoft Windows XP, Vista or 7; Pentium II, 600 MHz or greater; 256MB RAM; 200MB hard disk space; 800x600 resolution monitor; CD-ROM drive
